Peer Review Committee
Pratt Institute, School of Information
144 West 14th Street, 6th Floor
New York, NY 10011-7301

Dear Members of the SI Peer Review Committee,

Kindly accept this letter and submitted materials as my application for third-year reappointment as Assistant Professor in the School of Information at Pratt Institute. Enclosed you will find my curriculum vitae, as well as teaching, research, and service statements, and copies of my course syllabi, evaluations, selected student projects, curriculum development documents, and my most recent research articles.

Since joining Pratt, I have developed a research agenda that primarily focuses on using digital methods to study gender, sex, and sexuality in language. In my teaching, I have developed courses that bring together humanistic approaches with programming, machine learning, and digital humanities methods. I have also contributed to Pratt through service to faculty committees, the Pratt Faculty Union, and to student groups.

I will briefly highlight several accomplishments from my first two years at Pratt.

With regard to teaching: since Fall 2024, I have taught five courses across the School of Information: INFO 601: Foundations of Information; INFO 664: Programming Cultural Heritage; INFO 657: Digital Humanities; INFO 697: Special Topics—How to Build a Bot; and INFO 656: Machine Learning. Across these courses, I have worked to develop a teaching practice that brings together computational and humanistic skills, with particular attention to close reading, writing, and the contingent nature of knowledge.

With regard to research: since joining Pratt, I have established a sustained interdisciplinary agenda connecting queer and trans studies, digital humanities, and AI ethics. As a language scholar trained primarily in English literature, I use computational tools to examine how language related to gender, sex, and sexuality is represented, processed, and transformed through information technologies. A central concern of this work is understanding how computational mechanisms shape what can be seen, represented, and said in language data.

From Fall 2024 through Fall 2026, I have written five sole-author papers, two of which have been published in peer-reviewed venues and three of which are currently under review. Additionally, my book project, *Queer Code: Re-working Language Technologies*, is expected to be published in late 2027 or early 2028. Across these projects, I have sought to communicate across fields that do not always share methods or assumptions.

In addition to my research and teaching, I have participated in faculty committees, taskforces, and the Pratt Faculty Union, as well as contributed to external broader scholarly communities as a reviewer.

Taken together, my work has allowed me to build an exciting momentum, one which I am eager to further as a continued member of the Pratt SI faculty.

Thank you for your consideration.

Sincerely,

Filipa Calado
Assistant Professor
School of Information
Pratt Institute
