'Bin There' NYC Data

New York City produces 13,000 tons of landfill waste each day - 75% of these item are recyclable. The goal of this project was to create a centralized drop-off locator for common recyclable items that are not accepted in DSNY curb-side pick-up.

After a combination of web scraping and APIs from Open Data and Grow NYC, I combined all the data used leaflet.js to display the data as a single interactive map in a web application that allows users to locate a drop-off center near them based on boroughs and categories.

Data collection and interactive map visualization for recycling drop-off points in NYC. View the github site at https://kirstseg.github.io/BinThereNYC_Data/

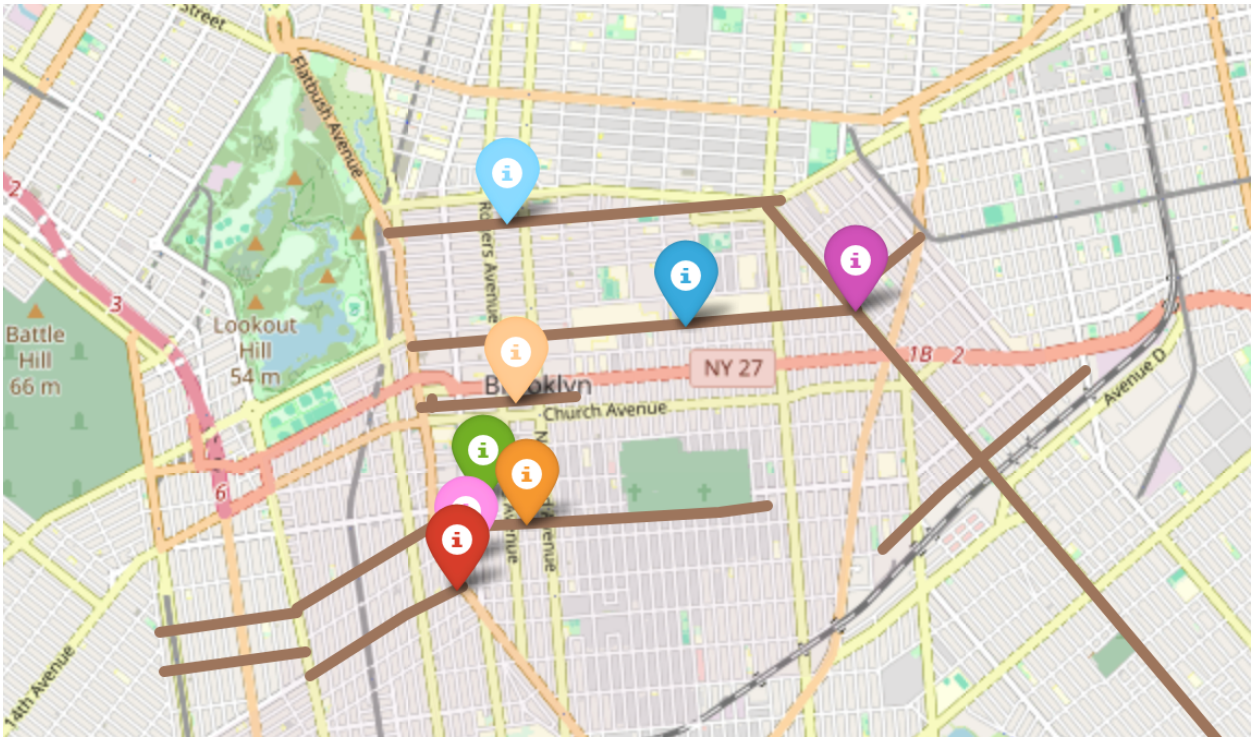

Mapping Slavery

This project was built using Python to visualize the streets in Brooklyn that are named after slave-holding families... The streets highlighted identify slave-holding families and list the names of the people held captive.

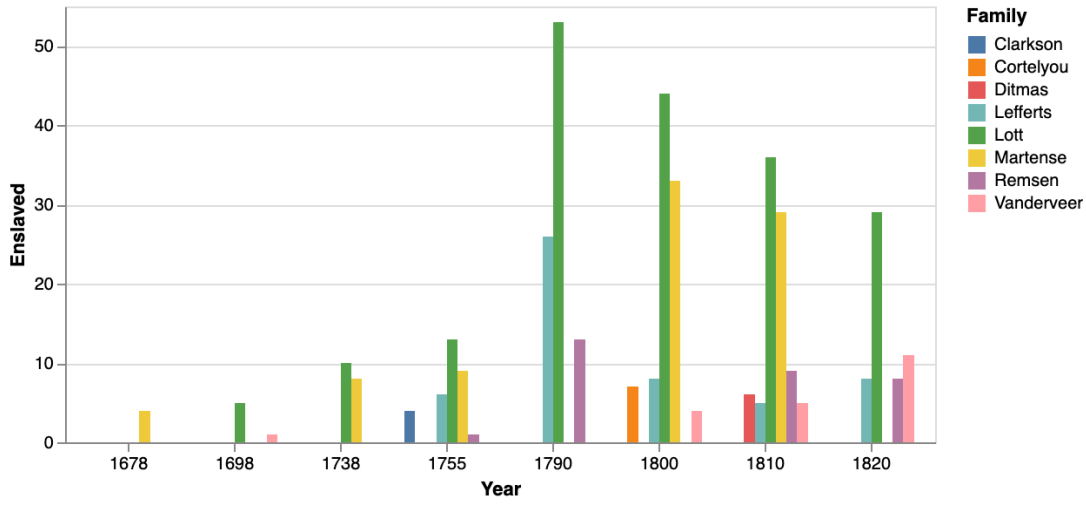

I looked up old maps in the digital collections of the New York Public Library to investigate evidence of plantations, and I found a map from 1855, "Plan of the city of Brooklyn, L.I.". This map showed old farm lines with the corresponding property owners, as well as planned streets and street names.

I saw a lot of familiar names on this map and decided to look further. This led me to finding enslavement information from The Journal of Slavery and Data Preservation, the NYC Municipal Archives, In Pursuit of Freedom and the North East Slavery Records Index. I confirmed a lot of the connections I made from the old city maps and decided to move ahead with this project. I feel very strongly that knowing the past informs the present and shapes the future.

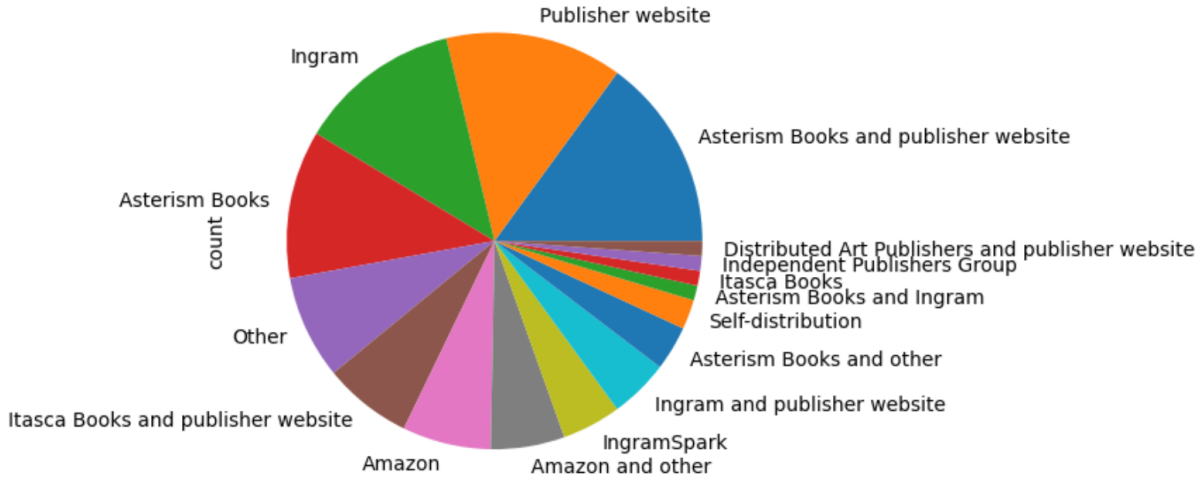

Mapping Poetry Publishers into the 21st Century

This project collocates data about poetry publishers to explore how recent commercial and historical phenomena impact the art form. Gleaned from the [Community of Literary Magazines and Presses' Directory of Publishers], its principle dataset is presented on a map that displays each publisher according to the year they were founded. A supplementary chart reflects the types of distributors these presses are now using (most notably Asterism, which rose to replace Small Press Distribution). These metrics allow for a visualization of what avenues (from book to publisher to distributor to bookstore) are opened and foreclosed at recent turning points for the industry.

Machine Divinity

Machine Divinity is a computational-artistic exploration of spiritual and apocolyptic language across anonymous online spaces.

The website interface allows visitors to interact with three oracles, prompting them to speak in the style of their eschatological category. These "oracles" generate their content from three language models, trained on 9,383 4chan posts scraped for spiritual and psychosis-coded language.

What Is Eschatology?

Eschatology refers to beliefs about endings, or, "the part of theology concerned with death, judgment, and the final destiny of the soul and of humankind". The categories you see on the homepage are drawn from a recent paper by Peterson & Baun, where they identified three eschatological formations on the 4chan board /pol/. Each one is tied to different conceptions of agency and crisis:

- **Conflictual:** violence, war, destruction, civilizational collapse
- **Revelatory:** awakening, hidden truth, prophecy, metaphysical insight
- **Resignationist:** passive doom, ego dissolution, unreality, dissociation

Peterson & Baun found, through an analysis of 4chan posts from 2014–2023, an increase of eschatological frameworks over time, "[reflecting] ideological adaptations to the increasing complexity and scope of societal issues, as perceived by the community" (2025). This project began with me exploring "spiritual" language on 4chan broadly, but I was fascinated by Peterson & Baun's findings and thought they would be a great framework for my data.

How the Oracles Work

Each oracle on the homepage corresponds to a language model trained on posts associated with one of these eschatological worldviews. The model you choose determines the "voice" and symbolic logic of the prophecy it generates.

Click an eschatology, type your prompt, and receive your prophecy...

Process & Workflow

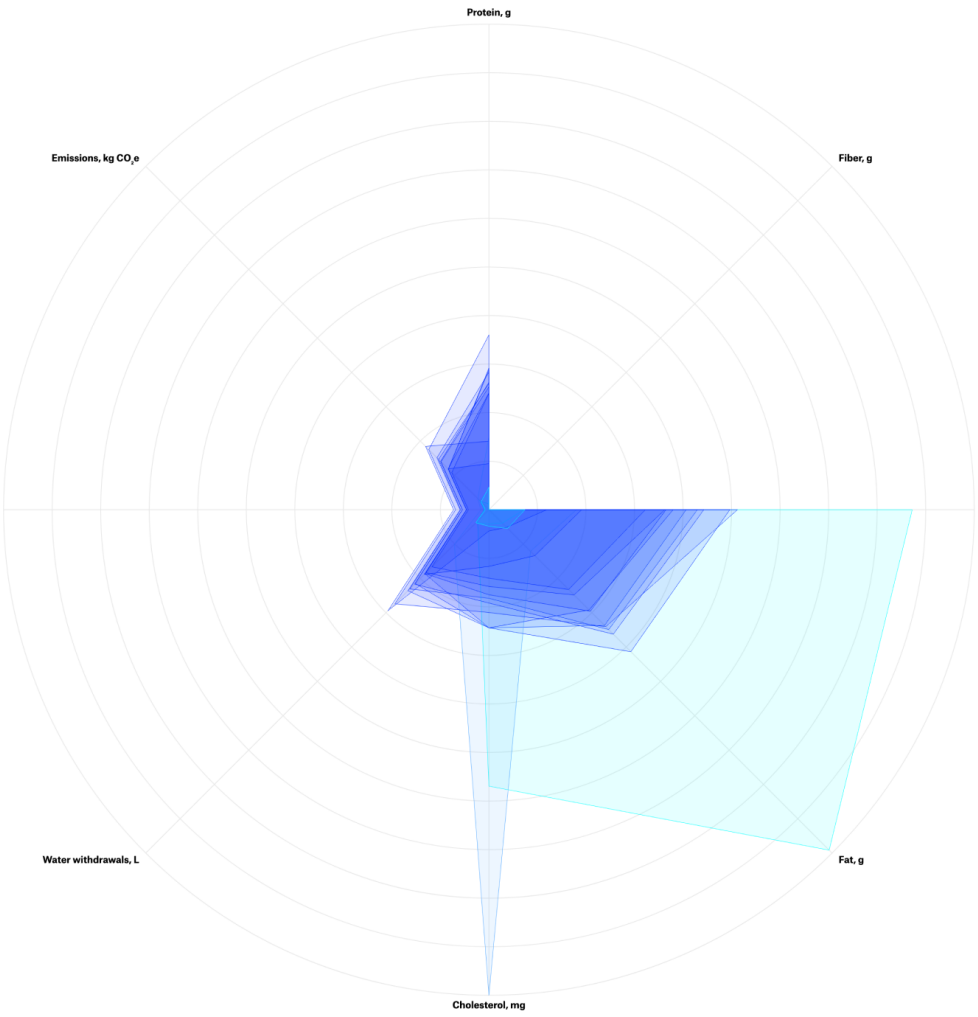

I scraped four 4chan boards using the public API, filtered posts through a lexicon of mystical and metaphysical terms, and cleaned the resulting text. Posts were categorized into conflictual, revelatory, and resignationist eschatologies using keyword-based heuristics. I generated embeddings and UMAP projections to visualize thematic clusters, then fine-tuned three GPT-Neo 125M models: one for each eschatology. These models were deployed via a FastAPI backend on HuggingFace Spaces and are accessed through this site's interface.

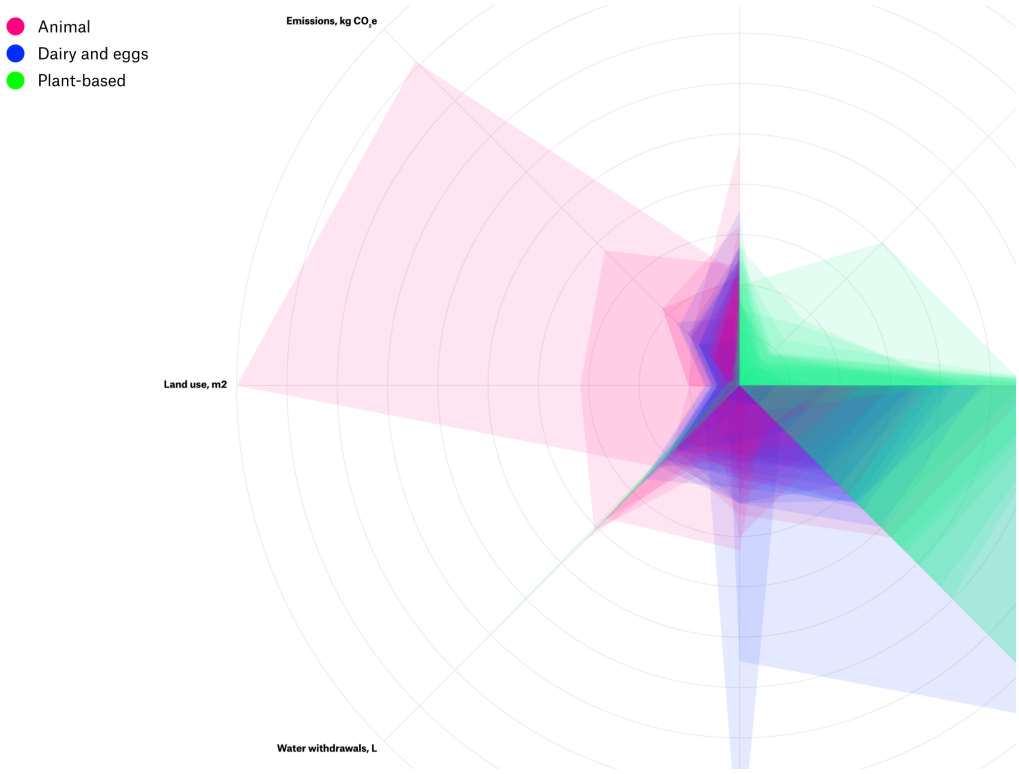

More information about my project, as well as access to full datasets and models, can be found on github.

Nowadays, the search for protein-rich foods is on the prescription of many fitness and muscle-building diets. But what else are we consuming along with these proteins?

The project aims to graphically relate data from foods' nutrients of animal, dairy, and plant-based protein sources with their impact, measuring greenhouse gas emissions, wasted water, and land use in the production.

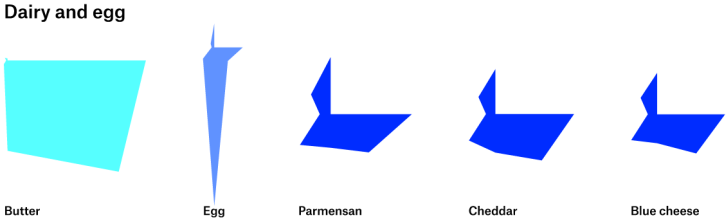

What is the best source
of protein for me?
Exploring the nutritional and
environmental costs of foods

Jocelyn Fung. INFO 697 - How to Build a Bot. Summer 2025.

Masculinity Bot

This project fine-tunes a bot that generates image and text based on language from popular men's magazines, like GQ and Esquire (see first image below). The data was gathered through web crawling, and the animation is handled with the drawbot python package and unsplash.

The second image, generated by the bot, was prompted with a text prompt "A manly man," and an image prompt: "Man in nature."

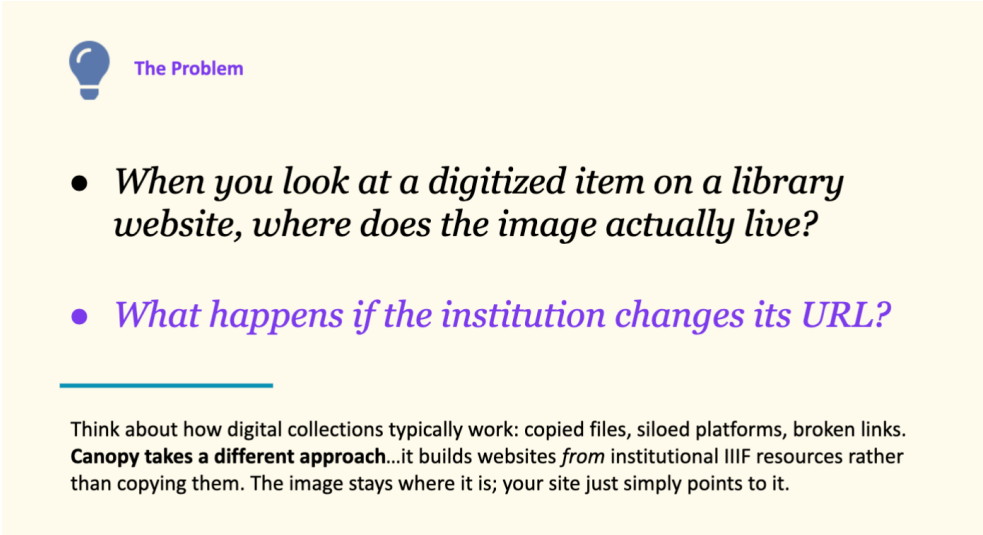

See more: https://github.com/jfung53/mensmagbot

text
Masculinity is often seen as a monolithic, homogeneous, or even self-isolating force a kind of universal human construct that we and others have been so conditioned to believe in.
Men need a good pair of shoes for a variety of reasons: a good pair of shoes is always better than nothing, but there's no way to guarantee you'll always have the same pair
Nice guys are going to wear the same pants, and it's not just the fashion press or magazine editorial staff who are going to be clamoring to get their hands on the jeans.
A real man, I really can't tell you much about him, but I can tell you what he looks like with those tuxedo sleeves and the wide-legged jeans and his big brown mustache.
Nice guys are so focused on their looks and grooming that they just don't notice anything special about their skin, which is, frankly, one of the best things about men.
A family man is a man who is so obsessed with his grooming regimen, he's often photographed in the mirror with his girlfriend, showing off his skin, hair, and face.
Fatherhood is a big deal, so if you want to be able to enjoy the benefits of being a man, you have to spend more time with your partner than you do with your dogs.
Modern men are obsessed with the look of their forefathers: their grandfathers, their great-great-great-great-great-great-great-great-great-great-great-great-great
Male friendship is a wonderful way to start a relationship, especially when it comes to love, but I want to make it clear that you don't need to do this yourself.
Fatherhood is no longer an essential part of a person's life, but it's a part that can help shape their physique and make their life a whole lot more interesting.
The hottest trend in men's fashion is the casual dress shirt, which has been a favorite of the style-minded since it first arrived on the scene in the mid-1800s.

Introduction to Canopy IIIF Tutorial

Alexa Frankelis
INFO-657: Digital Humanities
Spring 2026
05/11/2026
Final Project: Tutorial Outline / Lesson Plan

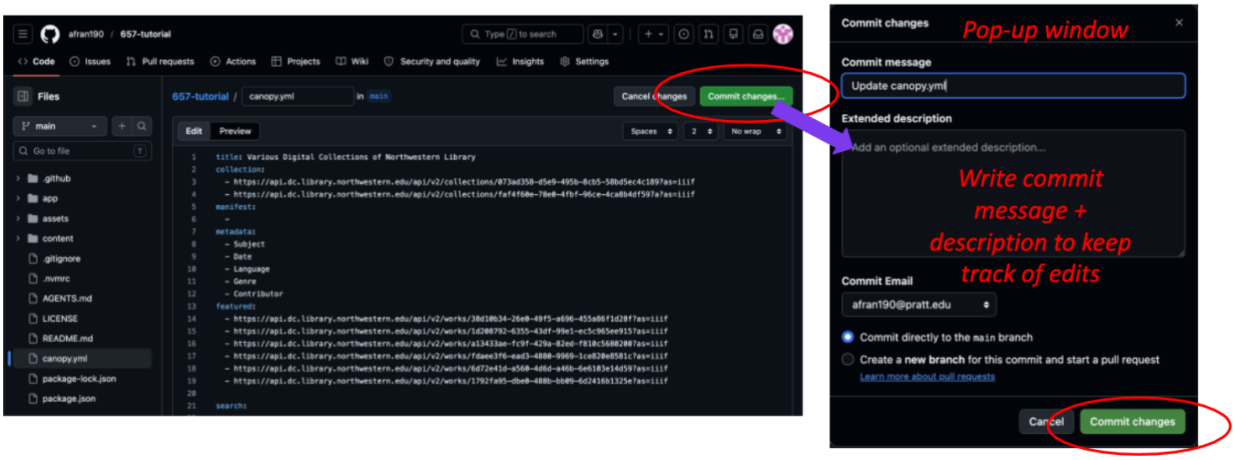

Lesson Plan: An Introduction to Canopy IIIF: Building Digital Projects with IIIF Materials
Expected number of attendees: 10–15 DH students (with assumed knowledge of IIIF Framework & GitHub; but not necessary)
Session length: 90 minutes

Objectives	**Students will:** • Use GitHub and a .yml configuration file to generate a static website from IIIF collections and manifests • Identify how IIIF's decentralized model keeps materials with originating institutions while enabling cross-institutional curation • Evaluate the relationship between metadata, discoverability, and interpretive framing in a digital project • Author a markdown content page with embedded interactive components (viewer, image) to add scholarly narrative • Assess when a lightweight static-site approach, like Canopy, is appropriate vs. a heavier CMS, like Omeka
Materials Resources, Space, Time: Slides 1-2, 5	**In the 90 minute tutorial, the following materials and resources will be used:** • Computer lab or individual student laptops with internet access ◦ No local software installation required ◦ GitHub accounts (free tier: students should create before session. Have link included in slide deck if not) • Projector and instructor computer

STEP 3.5

Commit & Explore Your New Site

1. Click **Commit changes** at the top of the editor, then confirm the commit.

KEY CONCEPT

Configuration as Curation

In the canopy.yml file every line in it is an interpretive and curatorial choice:

- **collection / manifest:** What's included and what's excluded from the project
- **metadata**: Which labels become navigable entry points for users
- **featured**: Which items are given visual prominence on the homepage
- **theme**: The visual tone of the project (serious? playful? institutional?)

Metadata is never neutral. The fields that an institution records, and the ones it doesn't, shapes how we find, interpret, and understand cultural heritage materials. Your configuration inherits and extends those choices through configuring the search.

Carlos Boglio Casado. INFO 657: Digital Humanities. Spring 2026

I'm interested in how digital humanities can be rethought from non-dominant perspectives (those shaped by Caribbean, Black, queer, and Indigenous knowledge).

I'm treating this as the beginning of something that could extend beyond the course. I've been encouraged by professors and peers to start drafting work that could eventually be developed into an article for venues like Caribbean Studies or DH Quarterly. So I'm approaching this as an early stage of a publishable piece (very ambitious). I also want to get more comfortable positioning my own research within broader scholarly conversations in a way that could translate into future publication.

The central questions I want to explore are: How do digital humanities tools and projects reproduce or challenge unequal power structures rooted in colonialism and extractive systems? What happens when DH is approached from outside dominant North American academic frameworks? How can digital scholarship produce counternarratives through feminist, queer, Black, and Indigenous forms of resistance?

Carlos J. Boglio Casado
INFO657-02
Prof. Filipa Calado

Rethinking Digital Humanities from the Caribbean

Digital humanities has increasingly become a space through which scholars rethink how knowledge is produced, organized, circulated, and preserved through digital technologies. Yet much of the field has historically developed through Anglophone and Global North institutional frameworks that continue to shape what becomes legible as "digital humanities" and what remains outside of its boundaries. In Latin American and Caribbean contexts, this creates a productive tension. While digital humanities often arrive through imported infrastructures, metadata standards, software, and methodological traditions, the region has simultaneously developed its own forms of digital practice that challenge the assumptions embedded within those systems. Rather than understanding the Caribbean as peripheral to digital humanities, this

A Caribbean-centered DH practice must ask what kinds of metadata, vocabularies, interfaces, and archival structures are necessary to represent Caribbean knowledge without compressing it. This might mean creating multilingual vocabularies, allowing for multiple geographic or diasporic affiliations, documenting uncertainty rather than forcing false precision, or designing interfaces that foreground relationships between people, places, languages, and cultural practices. It might also mean treating community knowledge, oral history, performance, and embodied memory as central forms of evidence rather than supplementary materials.
